1999 Fiscal Year Final Research Report Summary

Elucidation and Treatment of Retinal Involvement in Spontaneously-Diabetic Rats

Research Project

Project/Area Number

10671637

Research Category

Grant-in-Aid for Scientific Research (C)

Allocation Type

Single-year Grants

Section

一般

Research Field

Ophthalmology

Research Institution

Kanazawa University

Principal Investigator

SHIRAO Yutaka Faculty of Medicine, Kanazawa University Associate Professor, 医学部, 助教授 (50154365)

Co-Investigator(Kenkyū-buntansha)

TAKAHIRA Masayuki University Hospital, Kanazawa University Assistant, 医学部・附属病院, 助手 (70283108)

NISHIMURA Akira University Hospital, Kanazawa University Assistant, 医学部・附属病院, 助手 (70272979)

SEGAWA Yasunori University Hospital, Kanazawa University Lecturer, 医学部・附属病院, 講師 (00262569)

SAKURAI Mayumi Faculty of Medicine, Kanazawa University Assistant, 医学部, 助手 (50303269)

HIGASHIDE Tomomi University Hospital, Kanazawa University Assistant, 医学部・附属病院, 助手 (20291370)

Project Period (FY)

1998 – 1999

Keywords

retina / choroid / nitric oxide / dopamine / oscillatory potential / hypoxia / streptozotocin / OLETF

Research Abstract

The oscillatory potentials (Ops) of the electroretinogram were delayed in streptozotocin (STZ)-induced diabetic rats as long as they were hyperglycemic and were restored to normal as long as they became normoglycemic by a subsequent insulin treatment, which chronologically coincided with a decrease and an increase in the retinal blood

flow but not with the degree of retinal vascular leakage. The Ops of excised rabbit eye cups were very sensitively delayed to minute hypoxia. In control rats, nitric oxide synthase (NOS) inhibitors, non-selective or neuronal NOS-selective, similarly decreased the choroidal blood flow. Inducible NOS was hardly detected in the rat choroid. Total NOS activity in the retinal pigment epithelium (RPE)-choroid decreased in STZ-induced diabetic rats, while that in the neural retina was not. Neuronal NOS was supposedly responsible for the abovementioned decrease in the NOS activity. These results suggest that the OP delay in diabetes is underlain by hypoperfusion- ... More
