2007 Fiscal Year Final Research Report Summary

Determination of human brain area activated following olfactory stimulation using near-infrared

Research Project

Project/Area Number

18591860

Research Category

Grant-in-Aid for Scientific Research (C)

Allocation Type

Single-year Grants

Section

一般

Research Field

Otorhinolaryngology

Research Institution

Kanazawa University

Principal Investigator

MIWA Takaki Kanazawa University, Graduate School of Medical sciences, Associate professor (20229909)

Co-Investigator(Kenkyū-buntansha)

TSUKATANI Toshiaki Kanazawa University, University Hospital, Assistant Professor (20303307)

ITO Makoto Kanazawa University, University Hospital, Assistant Professor (50283106)

SHIGA Hideaki Kanazawa University, University Hospital, Assistant Professor (80436823)

KOBAYAKAWA Tatsu Kanazawa University, Advanced Industrial Science and Technology, Human Science and Biomedical Engineering, Researcher (70357010)

TODA Hideki Kanazawa University, Advanced Industrial Science and Technology, Human Science and Biomedical Engineering, Researcher (10520687)

Project Period (FY)

2006 – 2007

Keywords

Near Infrared Spectroscopy / sense of smell / trigeminal nerve / olfactory disorder / 嗅覚障害

Research Abstract

Recently, near-infrared spectroscopy (NIRS) has been used to measure activation of brain cortex. Change of both oxygenated and deoxygenated haemoglobin concentration were measured by optical topography systems (ETG-4000, Hitachi Medical Corporation, Tokyo) under the condition of olfactory or trigeminal stimulations. Although, the oxihemoglobin level with the frontal area of cerebrum accepted a tendency to be elevated by odor stimulation, but oxihemoglobin level from temporal to parietal area was elevated by trigeminal stimulation. However, there were some differences among the subjects.
