# 2002 Fiscal Year Final Research Report Summary

---

## Molecular insight of cancer metastasis of gastrointestinal tract - strategies of therapeutic implication

Research Project

### Project/Area Number

---

12470254

### Research Category

---

Grant-in-Aid for Scientific Research (B)

### Allocation Type

---

Single-year Grants

### Section

---

一般

### Research Field

---

Digestive surgery

### Research Institution

---

Kanazawa University

### Principal Investigator

---

**MAI Masayoshi** Kanazawa University, Cancer Research Institute, Professor, がん研究所, 教授 (80092807)

### Co-Investigator(Kenkyū-buntansha)

---

YASUMOTO Kazuo Kanazawa University, Cancer Research Institute, Assistant Professor, がん研究所, 助手 (90262592)

MINAMOTO Toshinari Kanazawa University, Cancer Research Institute, Professor, がん研究所, 教授 (50239323)

TAKAHASHI Yutaka Kanazawa University, Cancer Research Institute, Associate Professor, がん研究所, 助教授 (10179541)

### Project Period (FY)

---

2000 – 2002

### Keywords

---

Matrix metalloproteinase / angiogenesis /  $\beta$ -catenin / Cancer oteinases metastasis / Angiogenic inhibitor / liver metastasis

### Research Abstract

Metastasis is the most threatening event for cancer patients. In considering the main steps in the process of tumor invasion and metastases, the mechanism for invasion of the tumor cells through tissue barriers of the extracellular matrix(ECM) and neovascularization are not well understood, but they appeared to modulate the stromal microenvironmental events in the cancer host.

To clarify molecular mechanism of cancer metastasis, especially matrix metalloproteinase and angiogenesis using clinical materials, and to inhibit metastasis. We already reported that MT1-MMP expressed in the cancer cell membrane modulates and induces active MMP-2 existed in cancer stroma such as fibroblast or macrophages resulting in degradation of ECM in the process of cancer invasion and metastasis. We also reported that enhanced production of MMP-7 is implicated in the metastasis prognosis of human gastric and colorectal cancer. On the other hand, angiogenesis is essential for tumor growth and metastasis and dep ...▼ More
