2006 Fiscal Year Final Research Report Summary

Functional analysis of scaffold proteins for mammalian stress-responsive MAP kinase signaling pathways

Research Project

Project/Area Number	14086205
Research Category	Grant-in-Aid for Scientific Research on Priority Areas
Allocation Type	Single-year Grants
Review Section	Biological Sciences
Research Institution	Kanazawa University
Principal Investigator	**YOSHIOKA Katsuji** Kanazawa University, Cancer Research Institute, Professor (60200937)
Co-Investigator(Kenkyū-buntansha)	ITO Michihiko Kitasato University, School of Science, Associate Professor (90240994)
Project Period (FY)	**2002 – 2006**
Keywords	cadherin / cerebellum / deveropment and differentiation / genetically engineered mice / JNK / MAP kinase / scaffold protein / signal transduction
Research Abstract	Scaffold proteins of the mammalian MAP kinase (MAPK) cascades are considered having critical roles in spatio-temporal regulation of MAPK pathways by organizing their signaling components into functional modules. We are particularly interested in the functions of these scaffold proteins, mainly c-Jun NH_2-terminal kinase (JNK)/stress-activated protein kinase-associated protein 1 (JSAP1); a scaffold protein that participates in JNK MAPK cascades, both in vitro and in vivo. Our findings are summarized as follows : 1) We first investigated the JSAP1-null ES cells. We found that the cardiomyogenesis and neurogenesis process in JSAP1-null mutants were seriously impaired, which strongly indicated that JSAP1 plays an important role in cardiomyocyte and neural development (JBC, 2002 ; BBRC, 2005). 2) We also demonstrated that JSAP1 regulates cell movement in cooperation with the focal adhesion kinase (Oncogene, 2002 ; JBC 2005). 3) We further showed that JSAP1 scaffold regulates cell-cell interact ⋯▾ More
