1996 Fiscal Year Final Research Report Summary

Study on the adaptation of the colon after bowel transplantation

Research Project

Project/Area Number

07671374

Research Category

Grant-in-Aid for Scientific Research (C)

Allocation Type

Single-year Grants

Section

一般

Research Field

Digestive surgery

Research Institution

Kanazawa University

Principal Investigator

HASHIMOTO Tetsuo Kanazawa University Hospital Instructor, 医学部・附属病院, 助手 (40260559)

Co-Investigator(Kenkyū-buntansha)

YAGI Masao Kanazawa University Hospital Assistant professor, 医学部・附属病院, 講師 (00182303)

Project Period (FY)

1995 – 1996

Keywords

colon transplantation / adaptation

Research Abstract

The present study examined the change of colon graft in LEW to LEW rats with orthotopic small bowel and colon transplantation. There is no villi in the colon mucosa in the rats receiving with total small bowel and colon transplant at the time of three month after transplantation. Thirty percent of the rats receiving with half of the small bowel and colon graft had villi formation in the colon mucosa. Functional study such as maltose and glucose absorption test showed no evidence of absorption ability of the colon graft. These data suggest that the villi formation after bowel transplantation may be relation with intestinal graft length and that the villi of the colon is immature.
