## I. Purpose

This databook focuses on school children in Sri Lanka and Myanmar, whose people's lives are enriched by political stability and economic development. In Sri Lanka, the civil war ended in May 2009, and the process of ethnic reconciliation is progressing. In Myanmar, the parliamentary election was held in 2010 under the new constitution, and the first president took office in 2011. Democratic governments are reforming the economy, and people's lives are gradually developing. At this time when the socio-economic situation is improving the lives of children, it is necessary to carry out a comprehensive survey to understand the situation of school children in order to obtain effective information on educational policy.

The purpose of this survey was to collect basic information about school children necessary for educational administration, focusing on their body, culture, and life. We investigate children's play, domestic works and growth as a body aspect, value attitude and standard of conducts as a cultural aspect, and living hours, living practices, health habit and study habits as a lifestyle aspect. Guarantee of growth and development of child is the most important national issue.

Accurate measurement of school children's growth is one of the important issues for schools. Fostering children with strong and healthy bodies is necessary for the nation. Health is closely related to nutrition, exercise and lifestyle, and schools must contribute to the acquisition of healthy lifestyles for children. Childhood is also important in the acquisition of values and culture, and requires approaches and comprehensive interpretations from various perspectives.

We hope the results of this survey provide useful materials for the school health policies of both governments.

This academic work was supported by JSPS KAKENHI Grant Number 17H02192.

## II. Research Organization

This survey was made possible with the cooperation of three research organizations. They are the Japanese team, the Sri Lankan team, and the Myanmar team. The Japanese team has been conducting surveys of children in the Asian region for more than 30 years. The role of the Japanese team was to propose survey plans, design survey

forms, support survey implementation, analyze data, create data books, propose the use of survey results, and provide budgetary support.

Collaboration with the Sri Lankan team began with a letter from the Japanese team to School Health and Nutrition Branch, Ministry of Education. The survey was realized when the Ministry of Education accepted the Japanese team's proposal for cooperation in the survey. In addition, the University of Kelaniya offered research cooperation. In Sri Lanka, the Ministry of Education will be in charge of conducting survey, and the University of Kelaniya will be in charge of the survey analysis. The role of the Sri Lankan team was to translate survey forms, design sample, conduct surveys, enter data, data analysis, and utilize survey results.

In Myanmar, the Yangon University of Education, which accepted the proposal from the Japanese team, formed a research organization. The role of the Myanmar team was to translate the questionnaire, design the sample, conduct the survey, enter the data, data analysis, and utilize the survey results.

For the members of each team, refer to the research organization at the end of this book.

### **III. Questionnaire**

Japanese team proposed the survey items with reference to the "Questionnaire on Lifestyle, Health, and Values of Asian Children". This questionnaire was conducted by Sagawa et al. in Thailand, Myanmar, Nepal, and Japan from 2013 to 2016, and the results are published as a "Statistical Data Book on Lifestyle, Health and Values of Asian Children: Thailand, Nepal, Myanmar and Japan." This data book has been published in Kanazawa University Repository. [[https://kanazawa-u.repo.nii.ac.jp/?action=repository\\_uri&item\\_id=7193](https://kanazawa-u.repo.nii.ac.jp/?action=repository_uri&item_id=7193)] In selecting the survey items, the items of mental condition were reduced and social capital related items were added. In deciding the question items, we discussed with the Sri Lankan team and the Myanmar team. In the Sri Lankan version, the number of dietary items has been increased because nutrition and school lunch are the priority issues of the government. As a result, a questionnaire with 57 items was completed in the Sri Lankan version and 55 items in the Myanmar version.

The questionnaire completed in English as standard edition and translated into each national language. It was adopted Sinhala and Tamil version in Sri Lanka, Myanmar version in Myanmar. Please refer to each questionnaire.

Since most of the items from the previous survey were adopted in this survey, international comparison is possible. Especially in Myanmar, it is possible to compare with

the data in 2014, and it is possible to analyze the changes in the last 5 years.

#### IV. Sample and Survey Fields

The Japanese team proposed a sample basic design and decided it in consideration of the educational systems of both countries. The basic design is as follows. Student in the 5th grade of primary school and student in the 2nd grade of secondary school are selected as the respondent to a survey. The 2nd grade of secondary school corresponds to the 8 grade. Japan has a 6-3-3 system, with 5th graders aged 10-11 and 8th graders aged 13-14. Sample size was 200 students each sex and grade, totally 800 students per one standard unit.

In Sri Lanka, the 5th and 9th grades were set as the survey target grades according to the education system. Sri Lanka has a 5-4-2 system, with 5th graders aged 9-10 and 9th graders aged 13-14. The sample size was 1,000 for each sex and grade, for a total of 4,000 students. The target areas of the survey were 9 educational districts nationwide, and the number of samples in each area was proportional to the proportion of students in each area in the whole country.

In Myanmar, 6th and 8th grades were targeted for the survey. Myanmar is in the process of changing its education system, and the sixth grade of this year will be the fifth grade under the new system. Myanmar is a KG+5-4-3 system. 6th grade (new 5th grade) is 10- 11 years old, 8th grade is 13-14 years old. One region was selected from each of the three educational region nationwide, three townships were selected from within one district, and three schools were selected from each township. The sample size was 100

students per school, for a total of 2,700 students.

Both countries have never conducted a national survey to clarify the physical, health and lifestyle of children, and this survey provided extremely important information.

## V. Survey Conducted

In Sri Lanka, the Ministry of Education conducted a survey through nine district offices nationwide. The school health and nutrition branch was in charge of planning the survey, and a specialized organization directed the survey.

The School Health and nutrition branch completed the questionnaire in October 2019 and sent the printed questionnaire to the district offices nationwide. The district office conducted a survey at the target schools in December through the regional offices. The questionnaire was collected again by the Ministry of Education, which completed data entry in March 2020.

In Myanmar, Research team of Yangon University of Education went to the schools of Sagaing and Tanintharyi regions. The data of all regions are collected by the teachers from department of Physical Education and School Health.

The University of Education in Yangon completed the questionnaire in October 2019 and sent the printed questionnaire to cooperative universities. The survey was conducted at the target schools in December through the educational township office. The questionnaire was collected again at the University of Education in Yangon, where data entry was completed in March 2020.

## **VI. Sample Collected**

Survey data were inputted into Excel format at each organization and sent to Kanazawa University. Dr. Nakano, Nagoya Gakuin University done data cleaning process for analysis and sent back to each organization the data by Excel and SPSS format.

Sample of this survey is shown Table 1. Since the target grades are different between Sri Lanka and Myanmar, they are described as 'Grade 5 + 6' and 'Grade 8+9'.

## **VII. Data Analysis**

This statistical data book was analyzed using analytical data formatted by Dr. Nakano for SPSS. A cross-analysis was conducted on all question items by grade, gender, country and division / Province. It should be noted that the grades differ depending on the target country. To be precise, at two secondary schools in Sri Lanka, a survey was conducted on 50 8th graders at 2 schools, which was added to the 9th grade data. Similarly, at one secondary school in Myanmar, a survey was conducted on 49 9th graders, which was added to the data for 8th graders.

## **VIII. Research Outcomes and Utilization**

In this academic project, the same questionnaire survey was conducted in Sri Lanka and Myanmar. We have integrated the survey results from both countries into a single statistical data book. This book will be sent as PDF data to all cooperating organizations and schools. It will also be made public to the world by the institutional depository of Kanazawa University.

This collection of statistical data is very important and useful for understanding the situation of children in the survey year. Editors hope that many students, teachers, and educators will use it in academic libraries to help children understand and to formulate educational policies. In addition, the raw data of the survey will be shared by joint research organizations for academic analysis and will be used for research by researchers and graduate students. We hope that our collaborators will pursue research on mutual changes in children's bodies, cultures, and lifestyles, and write many academic papers.

We strongly urge collaborators on this project to carry out new research in five or ten years. If you use the unified or modified format of this survey, they will be compared with the results of our project.
